Introducing Keralite® SafeGuard

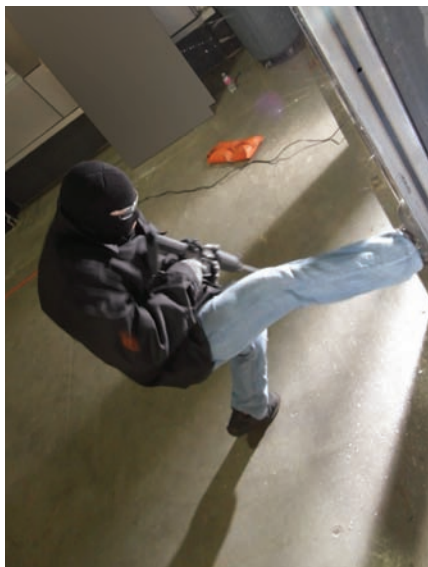

Keralite SafeGuard is a laminated and filmed fire-rated glass ceramic product that offers combined fire, impact, ballistic, and intrusion protection. Buildings with Safeguard installed provide a safe-zone for occupants, protecting against the deadly effects of active shooters, intruders, and terrorists.

Uncompromised life safety and physical security are needed against the triple threats of fire, accidental impact, and domestic terror, because precious seconds can be the difference between life and death.

A True Life-Saving Innovation

Keralite® SafeGuard is the only fire, ballistic, and intrusion resistant glazing product available on the market today. Along with exceptional safety features Keralite boasts a 97.1 color rendering index, sound transmission benefits and the lowest haze value of any ceramic in its glass. The old days of ugly wired safety glass are in the past. Today we have Safe-Guard glass designed to protect our future.

- ▶ Provides to 2-4 minutes incident response time
- ▶ Fire-rated from 20 minutes to 3 hours
- ▶ Glazes into standard fire door and window frames
- ▶ Ideal for new buildings and retrofit
