

LUNAX® PORTA

Frameless fire resisting all glass door for interior application EI60 - EI30 - Non-fire resistant

Characterised by its minimalistic design, LUNAX® PORTA fully glazed fire resisting doors meet the highest architectural expectations by offering doors with maximum transparency combined with fire resistance in interior application.

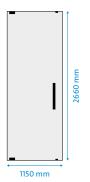

LUNAX® PORTA fully glazed fire resisting doors with frameless door leaves are self-closing single or double action doors enhancing the architecture of new build and renovation projects. The symmetrical pivoting system & door design allows the door to open in both directions.

ADVANTAGES OF LUNAX® PORTA DOORS

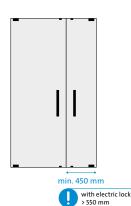

- Stylish and minimalistic fire resisting all glass door with four characteristic discrete clamps
- Classifications E, EW and EI (30 and 60)
- Single and double action mechanism (opening in both directions)
- Door leaf based on CONTRAFLAM® EN 14449 (laminated safety glass)
- Superior UV-stability (5000 hours according to EN ISO 12543-4)
- Proven mechanical durability (200,000 cycles; C5 according to EN 16034)
- Non-fire resistant double action door with same design that provides a consistent unique look to the doors with fire resistance properties

FEATURES & CUSTOMISATION

Glass panes of door can be exchanged by SGG DIAMANT® glass upon request to make use of its advantages, namely its perfect clarity, improved colour rendering and more natural light. LUNAX® PORTA can be manufactured with individual (RAL) colours for fittings, handles and customized handle shapes. Its glass can be adapted by application of silk screen printing on the surface or an edge frit. Decorative films in any design and colour can also be applied on the glass door leaf after installation without any technical restrictions.

In addition to fire resisting LUNAX® PORTA door, a non-fire-resisting version with same accessories and sizes available for fire resisting LUNAX® PORTA, can also be realized. As a result, all glass doors with and without fire protection in a specific project can have the same look.

An expansive network of Authorised Installers trained by Vetrotech is ensuring hassle-free mounting, flawless functionality and regular maintenance of door leaves and hardware. Authorised installers in your area can be advised by the local Vetrotech Saint-Gobain sales office.

levels in case of fire and human impact safety, combined with creative design freedom. Thanks to our unrelenting commitment to innovation, we are offering our customers fire resisting fully glazed doors which are tailored to suit nearly every imaginable application. Natural light and high transparency have become crucial elements in contemporary architecture. With CONTRAFLAM® glass as a major part of a LUNAX® PORTA door, you can combine optimum fire safety with maximum light in combination with various frame and supporting constructions: in timber, steel, dry-wall, brickwork, and concrete. With LUNAX® PORTA, we strive to design protective and aesthetic fully glazed fire doors, in direct collaboration with you, to meet the expectations for your high-end projects.
